

97158: 20ft ISO Deployable Field Hospital Module

Direct Sales

Body Type: Interlinking Field Deployable module
Condition From: Excellent

UK MoD field deployable hospital module. Built to a fantastic specification to be deployed as part of a larger number of container modules to build a fully functioning field hospital. These units can be utilised individually or with additional add on units to create a larger workspace in remote locations. They are built integrated as part of a 20ft ISO container with fork handling positions and standard ISO twist lock castings. They feature lighting and power points with individual fuse boxes and power inputs. With double drop down side walls on inbuilt winches, the sidewalls have integrated air inflated link assemblies that can be infinitely interlinked with other structures to create a sterile work environment for a range of conditions, built with the ability to withstand extremes of temperature and weather. They are suitable to either go back into military service or ideal for a range of civilian uses, including: Outdoor events, camp sites, festivals, remote work sites etc. We have 3 units in stock, which can be bought as a package to build a single large interconnected structure, or individually as required.
